## Children discover technics

*Why doesn't a high tower topple? How do you build a bridge so that it doesn't collapse? And how does a rope-way actually work? Children are fascinated by technical aspects. In the „KiTec - Kids Discover Technology“ project, youngsters can satisfy their curiosity by tinkering and constructing in an age-appropriate way. An exciting journey begins! b&m accompanies the sixth graders of the Georg-Christoph-Lichtenberg-Schule (GCLS) in Ober-Ramstadt as an educational partner.*

In cooperation with the non-profit association “Wissensfabrik”, which coordinates the KiTec initiative, we have supplied tools and materials to the GCLS students and their teacher Sylvia Wimmer. The GCLS article on this is [HERE](#).

As a business network, the “Wissensfabrik”, Ludwigshafen, is involved in promoting MINT topics at schools (MINT = mathematics, computer science, natural science and technology).
